For Immediate Release

Gullen Range Wind Farm Community Open Day 2016

7th October 2016, Sydney, Australia

Gullen Range Wind Farm will be holding a Community Open Day from 11am to 3pm on Sunday, 16th October, which will align with the Clean Energy Council's Australia wide wind farm open day.

The family friendly Open day will be a great opportunity for the community to see how a wind farm operates, experience what it's like to get up close to a wind turbine and find out more about wind energy at NSW's largest operating wind farm.

Visitors to the wind farm will be able to either drive to the wind farm or catch a bus from Crookwell. A complimentary bus will be leaving from the Memorial Park and Oval in Crookwell at 10am, 11.30am and 1pm, with parking available on surrounding streets. For those wishing to drive, we strongly recommend that you register for a car parking spot on our website to avoid disappointment.

Our fun, educational Open day will feature: a mini-tour of the wind farm, information displays in the marquee and kids' activities including face painting, craft and competitions.

There will be a Crookwell Lions Club BBQ, a Crookwell Public School P&C Refreshments stall and an ice cream van, all providing delicious food and drinks at the event.

A colouring-in competition is also open for pre-schoolers, infants (K-2) and primary (3-6). The sheet is available at local shops or you can download it from our website.

Derek Powell, Asset Manager for the wind farm said "We are very excited to open our doors to the public for the second year. The open day is one of many ways we are supporting the local community. We also have our clean energy program, community consultative committee, and community fund, all of which we are happy to tell you about at the open day, or check out our website."

Did you know that the wind farm produces enough energy to power in excess of 60,000 average homes on an average day? By 2020, Gullen Range Wind Farm will have saved 3 million tonnes of greenhouse gases compared to power from non-renewable sources!
